EDUCATION

CFA® Institute

Level 1 Candidate

London, UK | Nov 2026

Imperial College London

MSc Financial Technology

London, UK | Sep 2023 – Aug 2024

Relevant Modules: Financial Modelling, Asset Allocation and Investment Strategies, Market Microstructure Trading & Liquidity, Financial Econometrics, Machine Learning & Finance, Big Data in Finance, Accounting and Corporate Finance

Dissertation: Predictive Risk Analytics: Integrating Machine Learning Techniques to Foresee Financial Institution Failures

University of Exeter

BSc (Hons) Computer Science

Exeter, UK | Sep 2020 – Jun 2023

Awarded the **Global Excellence Scholarship**, The Exeter Award, Global Chums Mentor, Grand Challenges Finalist

Dissertation: Peer-to Peer Lending using Blockchain: A Path Towards Financial Inclusion

PROFESSIONAL EXPERIENCE

FlyRank AI | Backend AI Engineer Intern

London, UK | Jul 2026 – Sep 2026

- Currently building an automated web-scraping and data-processing pipeline using Axios, Cheerio and robots-parser, transforming unstructured web content into structured JSON for downstream AI applications

Uptrail | Data Analyst Intern

London, UK | Jul 2025

- Automated and reconciled 3000+ sales transactions and 500+ customer profiles using Python-based data cleaning techniques, applying fuzzy matching and datetime parsing to improve integrity and reduce processing errors by 90%
- Designed an interactive [Tableau](#) KPI dashboard integrating sales, product and customer datasets to visualise revenue (£95K from cleaning category), profit margins; reduced reporting time by 40% with improved operational reporting visibility
- Applied predictive modelling and statistical analysis on 1000+ subscriber records to predict churn, achieving ROC-AUC 0.82 and highlighting watch time, promotions, and referrals as top churn drivers

Imperial College Business School: Student Investment Fund | Quantitative Analyst

London, UK | Sep 2023 – Aug 2024

- Developed a medium-frequency trading pipeline, utilising machine learning techniques to forecast excess returns, yielding a 15% boost in predictive accuracy, aligning key financial performance indicators (KPIs) with trading signals in global markets
- Conducted extensive literature reviews of machine learning methods—Kelly & Xiu (2023) for return prediction and Benhamou (2020)/Markowitz++ for covariance forecasting; short listing 4 machine learning methods for implementation
- Proactively conducted thorough analysis of extensive financial time-series data, employing both traditional and alternative data sources (order flow imbalance, sentiment scores) to derive high-fidelity trading signals

Juris Technologies | Software Engineer Intern

Kuala Lumpur, Malaysia | Jul 2022 – Sep 2022

- Pioneered DevOps projects using agile methodology, optimising User Acceptance Testing (UAT) pipeline and coding in Java to implement efficiency-boosting measures reducing test cycles by 8 hours, enhancing client satisfaction by 120%
- Applied Oracle PL/SQL techniques to resolve 120+ complex production support tickets, improving client database performance by 15%, and reducing operational issues by fixing software bugs
- Demonstrated strong multitasking and time management skills by balancing software development and client consultations to key clients such as HSBC Malaysia, Maybank Malaysia & BMW Australia delivering insights on implementing best system practices, leading to a 25% enhancement in internal operational efficiencies

The Intern Academy | Python Projects Summer Intern

New Delhi, India | Aug 2021

- Created a robust machine learning optimisation framework, applying Python and real-time runtime data analysis and sophisticated hashing algorithms, fortifying the security and confidentiality of sensitive financial data
- Engineered a comprehensive automation framework for end-to-end software testing, removing the need for manual analysis, thereby slashing test execution time by 60% and increased the testing coverage by 2 times

RELEVANT PERSONAL PROJECTS

Options Risk & Exposure Dashboard

Sep 2025

- Constructed an interactive [Tableau dashboard](#) visualising spot price trend, implied volatility surfaces, strike-level exposures by sector, and convexity risk, improving portfolio risk monitoring and reporting
- Integrated financial models and derivatives concepts, leveraging option pricing and Greeks (Delta, Vega, Gamma) to generate KPIs such as Vega-to-Gamma ratio and volatility sensitivity, strengthening risk assessment accuracy and data-driven decisions

ADDITIONAL SKILLS

Technical Skills: Python, MySQL, R, Microsoft Office, VBA, Tableau, Fixed Income Markets Certification (Wall Street Prep)

Languages: English (fluent), Hindi (native), Maithili (native), Malay (fluent), Mandarin (basic)

EXTRA-CURRICULAR & INTERESTS

- Vice President, Imperial Business School India Careers Business Club: Organised events and workshops for 200+ participants
- Academic Leader, MSc Financial Technology: Facilitated communication between students and faculty of the Finance Suite
- Volunteer, Sunway Student Volunteers: Completed 59 hours of community service
- Sports: Competitive athlete in tennis, pickleball and running; training 20+ hours weekly in tennis and actively training for marathon participation
